

SafeCharge Lockers

Protect hardware, data and battery state

With the increasing use of laptop computers, having secure overnight storage for high value items is becoming an essential requirement.

The new Safecharge Locker is ideal for schools, colleges, universities, offices and leisure centres where the user wants to safely store these items during the day or over night. The Safecharge Locker has two unique features. Firstly it is made from 2mm thick heavy gauge steel (more than double the thickness of standard lockers) giving extra strength and security. Secondly each compartment can contain a charging element.

Together it not only keeps your laptop, mobile or any ac/dc adaptor safe but charges the batteries at the same time.

Variety

- FIVE compartment can be stacked, easily transported.
- TEN compartment can also fit the laptop bag.
- FIFTEEN individual compartments.

Locking

- KEY— Individual key for each compartment.
- SWIVEL lock for use with students own padlock.
- COIN OR TOKEN RETURN — User inserts coin to use the compartment.
- ELECTRONIC — Swipe card, key fob, proximity chip and integration into most access control/e-purse systems.

Security

- It looks like a normal locker.
- Both sides of the cam lock engage into the door frame.
- For added security, a steel bar can be added and locked down the front of the doors.

Manufactured in the UK

All units are PAT tested before leaving the factory (with a certificate) to ensure they meet all European standards and legislation. They are CE Marked, earthed and surge protected.
